### **Foreword**

The 1984–1986 cumulative index differs from those published in previous years in several important ways. Beginning in January 1986 we added 23 more radiologic journals, bringing the total number of journals in the cumulative index to 34. To keep the size of the volume within practical bounds, we are now publishing a 3-year cumulative index rather than a 5-year index. A list of all the journals in the index, along with the publishers' addresses, is provided on pp. iv-v.

All of the material in the most recent 12 volumes of *Radiology* and 3 volumes of *RadioGraphics* is covered in the index, including editorials, opinions, special reports, letters to the editor, book reviews, obituaries, and abstracts. The major papers from the other 32 journals are included.

Some new subject terms have been added, and others eliminated or combined, to provide a complete and useful selection of terms. For the convenience of users, we have supplied a list of all the subject terms in the index; this can be found on pp. 505–519.
